

Week 10 Reading

Exploratory Modeling & Scenario Discovery

1 Overview

Read J. R. Lamontagne, P. M. Reed, G. Marangoni, K. Keller, and G. G. Garner [1]. Focus on the main text and figures (skip the Methods section and Supplementary Material unless you're curious).

2 Wednesday Discussion: Figure Jigsaw

On Wednesday, each person will lead a **3-minute explanation** of one figure or figure group from the paper. Sign up for your slot on Monday in class.

Slot	Figure(s)	Focus
1	Fig 1a	How did they sample the policy space? Why exponential growth in abatement?
2	Fig 1b–d	What do the tradeoff clouds show? How is “tolerable” defined?
3	Fig 2a	Which factors dominate each metric? What’s surprising?
4	Fig 2b–d	How do factor sensitivities shift over time? What’s the policy implication?
5	Fig 3a–b	How do robust abatement pathways narrow as climate sensitivity rises?
6	Fig 3c + conclusion	What happens at median climate sensitivity? What’s the headline message?

For your presentation, address:

1. **What** the figure shows (axes, colors, key features)
2. **So what** — the main takeaway
3. **What assumption or choice** would change the result

3 Prep Question

Each person should also prepare **one discussion question** about the paper (not necessarily about your figure). Good questions connect the paper’s methods or findings to concepts from earlier in the course or to your final project context.
